34 MISO: Building the Perfect Beast

As it addresses problems that contributed to last August's blackout, the Midwest ISO struggles with staffing, "grandfathered" service agreements, and integration issues.

By Michael T. Burr

40 Profit Without Costs

A former FERC chairman asks: Should the cost of transmission infrastructure improvements be rolled-in with the costs shouldered by utility companies and their native customers, even if those customers receive no benefit from the expenditure?

By Curtis L. Hébert

50 Global Warming: The Gathering Storm

Once an opponent of the Kyoto Protocol, Russia is set to ratify it later this year. Will the growing alliance between Russia and the EU force the United States to satisfy the terms of Kyoto? *By Peter J. Fontaine*

56 Long-Term Power Contracts: The Art of the Deal

The authors examine a "laddered" approach to pricing, whereby a wholesale supplier, instead of locking in to a long-term contract for 100 percent of current load, would be more secure financially with only one or a few staggered, partial commitments over time. *By Amy Roschelle, William Steinhurst, Paul Peterson, and Bruce Biewald*

62 Solving the Crisis in Unscheduled Power

How should power flowing between NERC-certified balancing authorities be priced? The author proposes a formula. *By Robert Blohm*
